

# barryvdh/laravel-dompdf

install package menggunakan command ini:

```
composer require barryvdh/laravel-dompdf
```

dalam controller, jangan lupa include DomPDF. kemudian load data macam kita biasa buat untuk view. Perbedaannya kat sini, kita panggil PDF::loadView('nama\_blade', [data]) instead of view().

```
use Barryvdh\DomPDF\Facade\Pdf;
```

```
class ReportController extends Controller
```

```
{  
    public function download()  
    {  
        $data = [  
            'title' => 'Laporan Bulanan',  
            'date' => date('d/m/Y'),  
            'content' => 'Ini contoh report PDF.'  
        ];
```

```
        $pdf = Pdf::loadView('pdf.report', $data);
```

```
        return $pdf->download('laporan.pdf'); // download
```

```
        // return $pdf->stream('laporan.pdf'); // terus buka dalam browser
```

```
    }  
}
```

untuk gambar dalam output tu, guna `public_path('img/logo.png')`;

tapi kalau kita nak guna asset, kena enable dulu option `isRemoteEnabled` untuk remote. kat bawah ni contoh code untuk enable gambar guna `asset()`;

```
// apply option masa create instance
```

```
$pdf = \PDF::setOptions([  
    'isRemoteEnabled' => true,  
    'defaultFont' => 'sans-serif'  
])->loadHTML($pdfView)  
->setPaper('a4', 'portrait');
```
