

setasign/fpdf

install package guna composer:

```
composer require setasign/fpdf
```

dalam controller, kena buat satu-satu line output macam kat bawah

```
<?php
```

```
namespace App\Http\Controllers;
```

```
use Illuminate\Http\Request;
```

```
use setasign\Fpdi\Fpdi; // kalau nak guna FPDF untuk import pdf lain  
use FPDF;
```

```
class PdfController extends Controller
```

```
{
```

```
    public function generate()
```

```
    {
```

```
        $pdf = new \FPDF();
```

```
        $pdf->AddPage();
```

```
        $pdf->SetFont('Arial', 'B', 16);
```

```
        // Title
```

```
        $pdf->Cell(0, 10, 'Hello dari Laravel + FPDF!', 0, 1, 'C');
```

```
        // Normal text
```

```
        $pdf->SetFont('Arial', '', 12);
```

```
        $pdf->Cell(0, 10, 'Ini contoh content dalam PDF.', 0, 1);
```

```
        // Output to browser
```

```
        $pdf->Output('I', 'contoh.pdf');
```

```
        exit;
```

```
    }
```

```
}
```

lepas create objek FPDF(), tambah page dulu guna AddPage(). untuk next page, kita kene panggil AddPage() lagi.

panggil Cell() untuk add baris dalam pdf tu.

untuk output, panggil Output().
